

# Pediatric Specialists of Virginia (PSV) Now Offering EOS Imaging

PSV is proud to announce that we have partnered with the National Scoliosis Center (NSC) to bring EOS Imaging services to our spine curvature and leg alignment patients.

With growing concerns about the increasing amount of radiation exposure in medical imaging today and the long-term effects they pose (especially in children), we are thrilled to bring this low-dose and high-quality imaging technology to the children and families we serve.

## **EOS Imaging Benefits:**

- Low-dose imaging
- High-quality resolution
- Improved diagnostic and treatment accuracy
- Full-body and weight-bearing abilities
- Fast exam time

PSV patients who are directed by their provider for EOS Imaging will visit the National Scoliosis Center, located in the “Lower Level” of the Hamaker Court Office (same building) at 3023 Hamaker Court in Fairfax. Patients should follow the appropriate signage directing them to NSC’s office. They will be administered an EOS exam by their staff. All results will be safely communicated back to your PSV provider for analysis and treatment.
